

MAXIMISING VALUE THROUGH INNOVATION

The background of the slide is a photograph of a mining site. It shows a large, steep, reddish-brown earthen bank or cliff face. At the top of the bank, there are several trees and a clear blue sky with some clouds. In the foreground, there is a pile of light-colored, rocky material, possibly waste rock or a different type of ore. The overall scene is brightly lit, suggesting a sunny day.

Mining Studies and Mine Planning Services

Quantify and clarify your risk. Maximise your returns.

Benefit from greater commercial confidence and technical clarity throughout your mining project's lifecycle.

Our highly experienced mining study and mine planning team can help you realise maximum value from resource discovery to mine closure and every step in between.

Whether we are assisting you secure funding to make valuable investment decisions, creating more efficient mine plans, or delivering operational support, we are with you every step of the way.

Passionate specialists. Sharper, faster insights.

The MGT Way is engineering advice grounded in rigorous data analysis, enabling robust design.

We use this approach to fuse expertise, great minds, and technology to change the way geotechnical and mine planning solutions are embraced to maximise value in the mining industry across Australia and the world.

Founded in 2010 by Dr John Player, MineGeoTech has offices in Perth and Kalgoorlie, Western Australia.

We offer a range of mining studies and mine planning services, including:

- Open pit and underground projects across varying commodities
- Scoping to Feasibility mining studies
- Ore Reserves reporting in compliance with the JORC Code
- Independent technical reviews

- Project management
- Mining method evaluation and optimisation studies
- Mine design, scheduling and financial modelling to enable the safe achievement of production targets and to maximise shareholder value
- Site secondments

We are committed to project evaluation through sustained value delivery.

Each project focuses on safe, financially profitable, technically appropriate, environmentally and socially responsible extraction.
